FINAL VERIFIED EVIDENCE

Project Summary

LAFRYHI AI Radar is a production decision-intelligence platform for small businesses. Governed sources enter a Gemini 2.5 Flash workflow on Vertex AI, structured output is validated, records are persisted in Firestore, and publication remains gated by Human Verification.

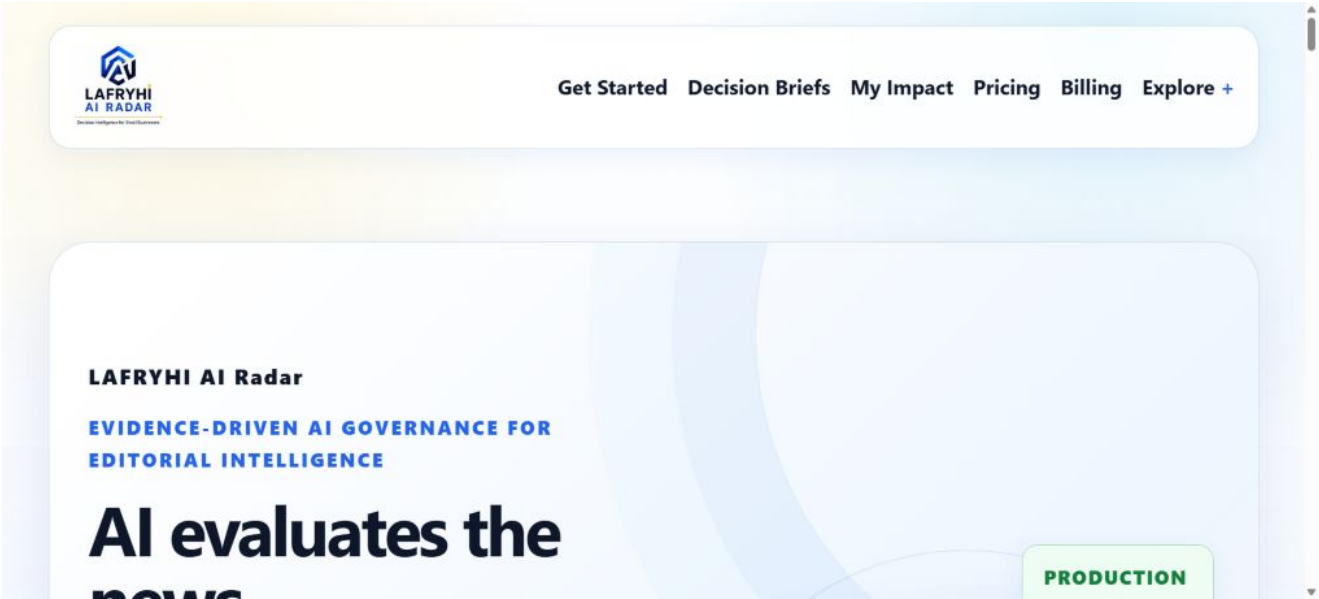

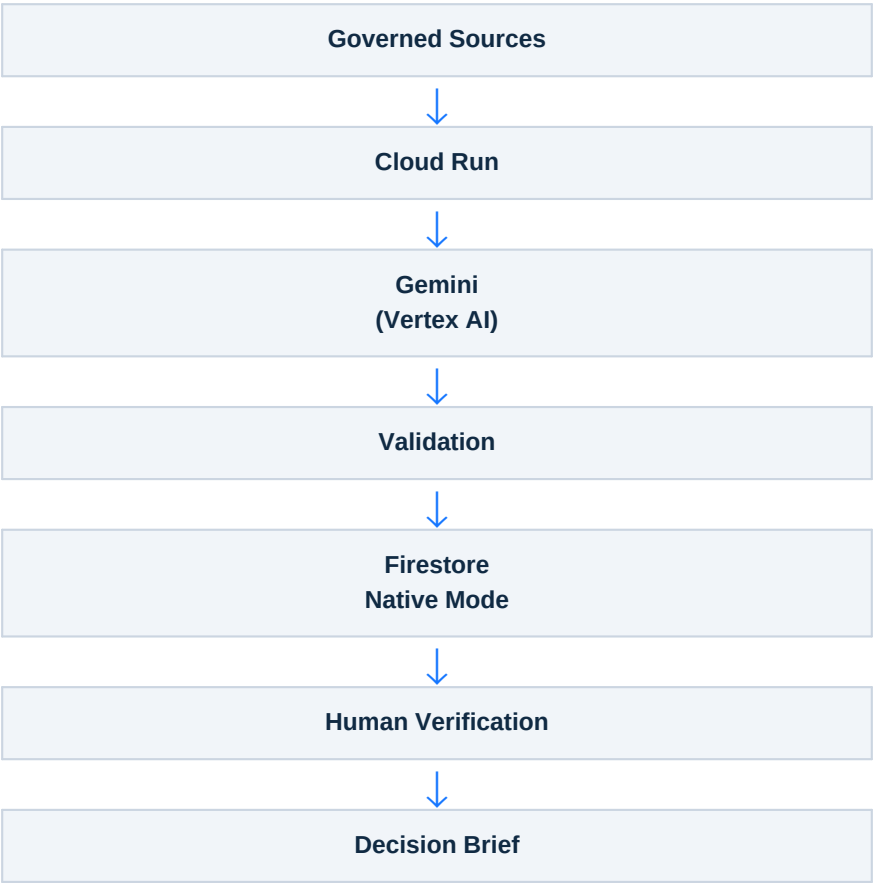

Figure 1. Live production homepage at the Cloud Run URL. Captured 2026-08-02T00:58:11Z. Proves the public application is deployed and identifies the evidence-driven governance product.

Project	LAFRYHI AI Radar
Category	Small Business Services
Production	Cloud Run revision lafryhi-ai-radar-00059-r8n
Core control	Human Verification is required before publication

Architecture

The production workflow keeps evidence, model reasoning, validation, persistence, and human authority as explicit stages.

Runtime	Next.js standalone container on Cloud Run
AI	Gemini 2.5 Flash through Vertex AI
Persistence	Firestore Native Mode
Secrets	Google Secret Manager references
Operations	Cloud Logging, Cloud Monitoring, health and readiness checks

Cloud Run

Cloud project	lafryhi-ai-radar-xprize
Service	lafryhi-ai-radar
Region	us-central1
Revision	lafryhi-ai-radar-00059-r8n
Image	operator-legacy-read-fix-v2-20260802
Deployment	Cloud Build f5a1c5e9-981d-4279-b7a4-d8e310ae333e
Ready	True
Traffic	100%
Health	HTTP 200 - status ok
Readiness	HTTP 200 - configuration ok; Firestore ok; Vertex AI configured; billing configured
URL	https://lafryhi-ai-radar-1090908272413.us-central1.run.app

Verified 2026-08-02 after deployment. The service returned the active revision in `/api/health`; `/api/readiness` confirmed configuration, Firestore, Vertex AI, and billing readiness.

Gemini API

The authenticated production dashboard provides operational evidence that Gemini analyses are executing through the governed workflow.

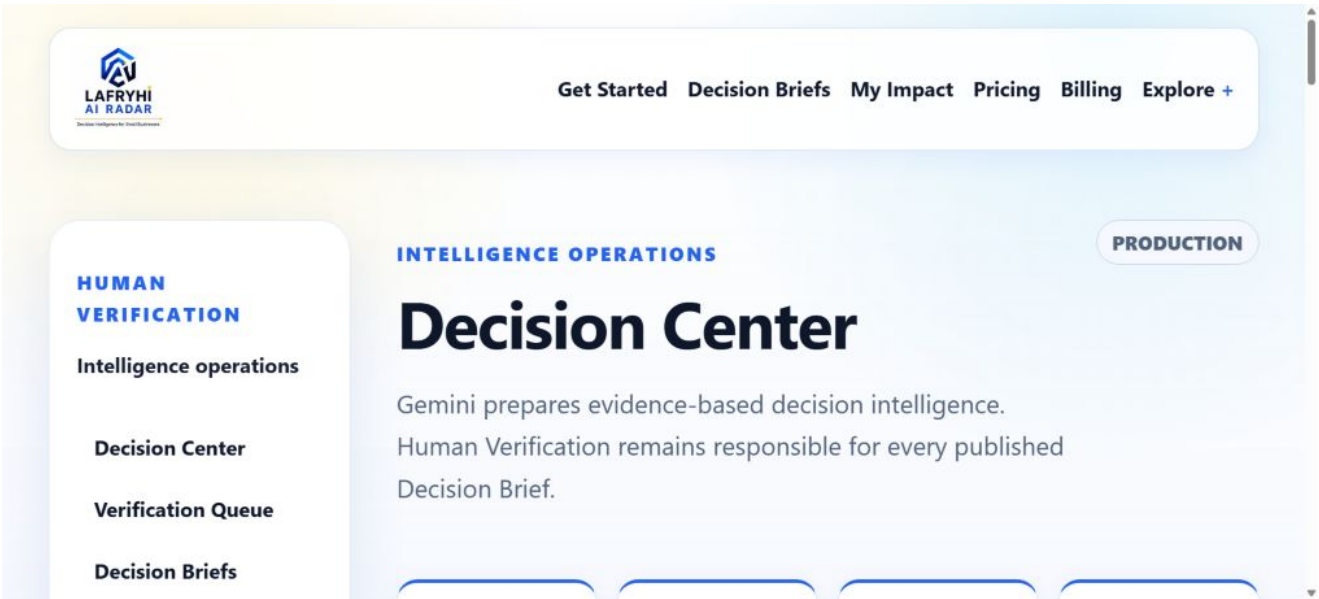

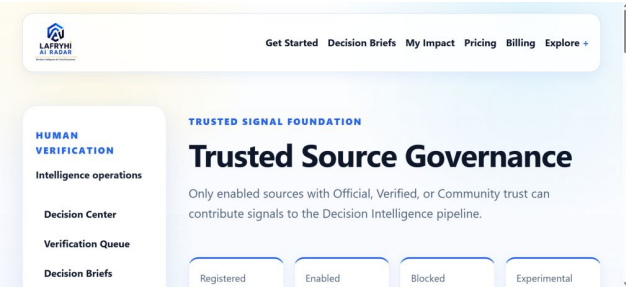

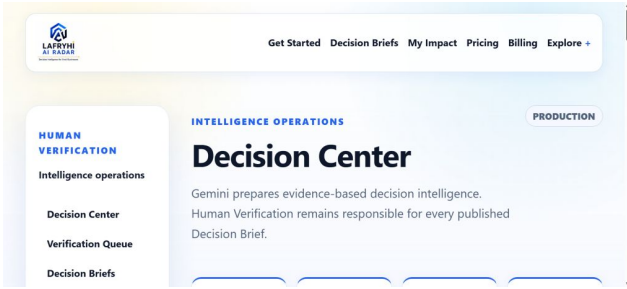

Figure 2. Authenticated Operator Dashboard. Captured 2026-08-02 after revision 00059-r8n. Proves Gemini 2.5 Flash records, completed runs, awaiting Human Verification, verified analyses, and published Decision Briefs.

Provider	Vertex AI
Model	gemini-2.5-flash
Completed runs	6
Awaiting verification	3
Verified analyses	3
Decision Briefs	3
Workflow	Source → Gemini analysis → validation → Human Verification → Decision Brief

Decision Center

Decision Brief

Figures 3-6. Genuine production captures from 2026-08-02. They prove governed official sources, authenticated operational metrics and review states, the public decision history, and an evidence-backed published brief.

Billing

Authenticated Google Cloud Billing Reports for the project-scoped report. Values below are transcribed only from the visible report.

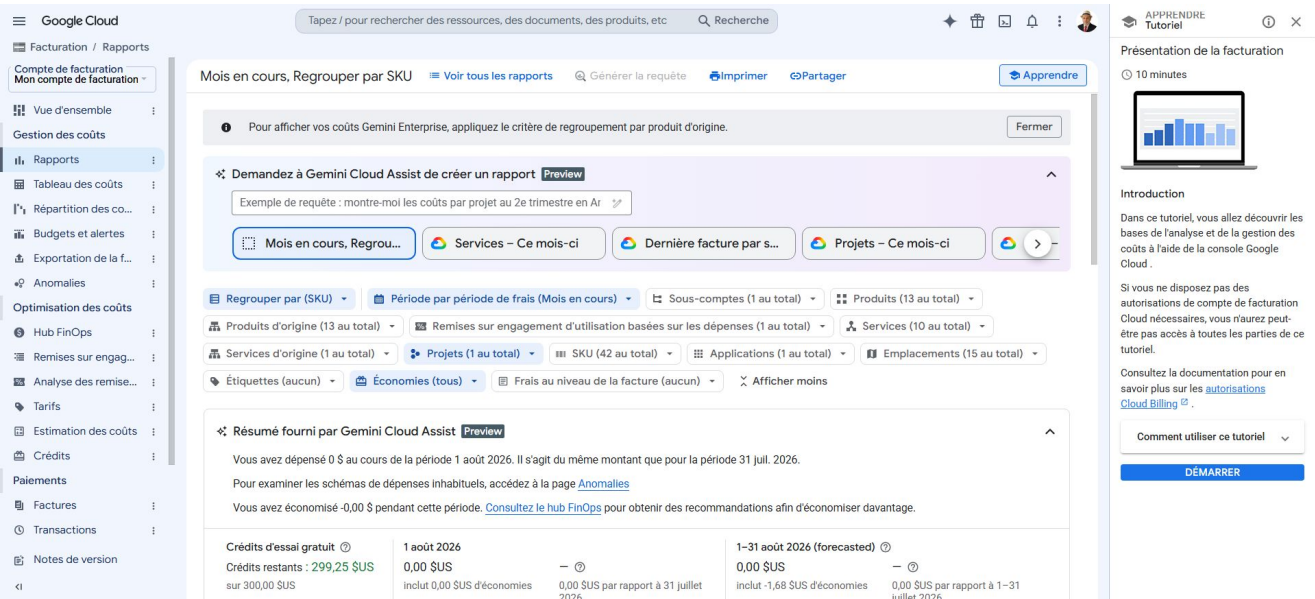

Figure 7. Authenticated Google Cloud Billing Reports. Captured 2026-08-02T02:21:51Z. Proves genuine current-period billing data and remaining Google Cloud free-trial credits.

Project filter	lafryhi-ai-radar-xprize
Current period	1-31 August 2026
Spend shown	US\$0.00 for 1 August 2026
Free-trial credits	US\$299.25 remaining of US\$300.00

Observability

Cloud Logging records for revision `lafryhi-ai-radar-00059-r8n` confirm successful production traffic after the compatibility fix.

Availability	Health and readiness endpoints returned HTTP 200
Operator	GET /operator returned HTTP 200
Source Registry	GET /operator/sources returned HTTP 200
Operator latency	Observed 0.008s-0.023s for server component requests
Source Registry latency	Observed 0.125s for authenticated page request
Errors after fix	No HTTP 500 or Zod exception in the audited revision window
Monitoring	Google Cloud uptime checks continued to receive HTTP 200 readiness responses

Operational incident resolution

A legacy Firestore analysis read failed current key-point and risk length validation. Revision 00059-r8n bounds only legacy-derived fields at read time, preserves current write validation, and does not rewrite stored records. The authenticated dashboard and Source Registry then loaded successfully.

GitHub

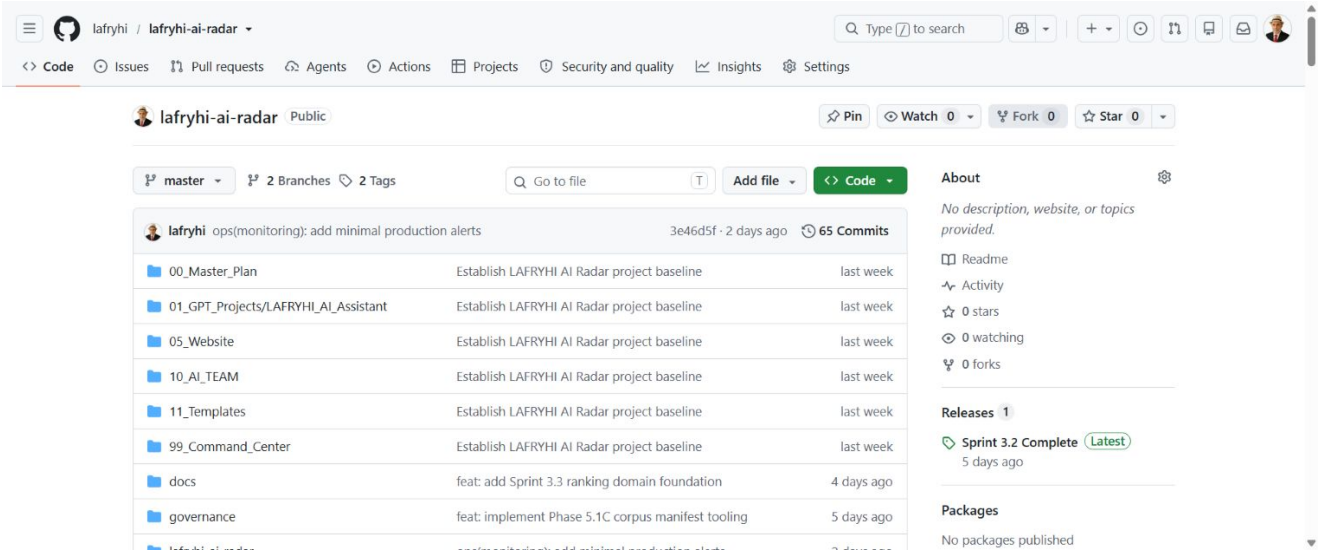

Figure 8. Public GitHub repository. Captured 2026-08-02T01:05:39Z. Proves public visibility, repository tree, README presence, and commit history.

Repository	https://github.com/lafryhi/lafryhi-ai-radar
Visibility	Public
Captured commit	3e46d5f - ops(monitored): add minimal production alerts
History	65 commits visible at capture time
Documentation	README and project documentation present
License	MIT License - LICENSE

Live Demo

Judge URL: <https://lafryhi-ai-radar-1090908272413.us-central1.run.app>

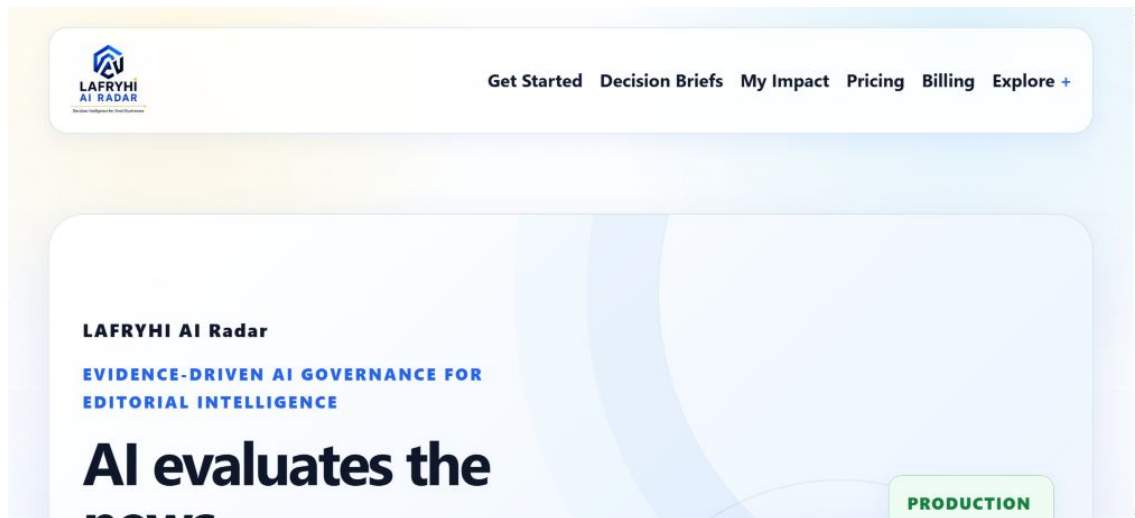

Figure 9. Working production homepage. Captured 2026-08-02T00:58:11Z. Proves public access to the intended desktop web application.

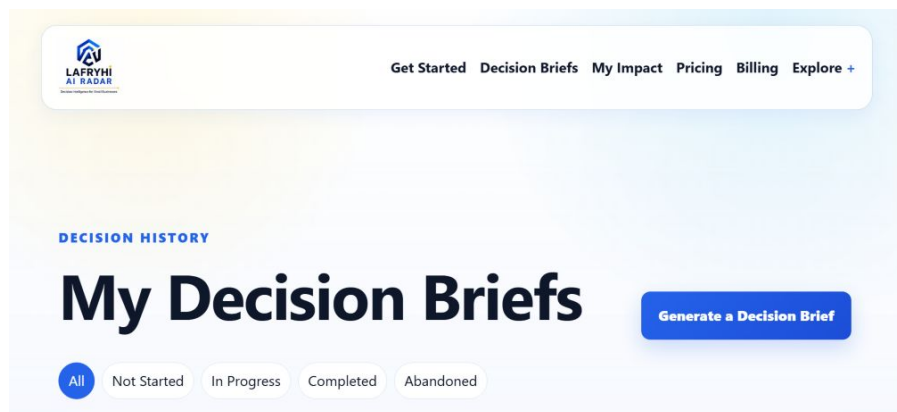

Figure 10. Public Decision Center. Captured 2026-08-02T00:58:38Z. Proves the live workflow exposes an approved decision history and links to evidence-backed briefs.

Judge instructions: open the live URL, select Decision Briefs, open the listed brief, and review the Gemini insight, evidence references, business impact, recommendation, and decision state. Operator access is protected and is evidenced separately in this package.

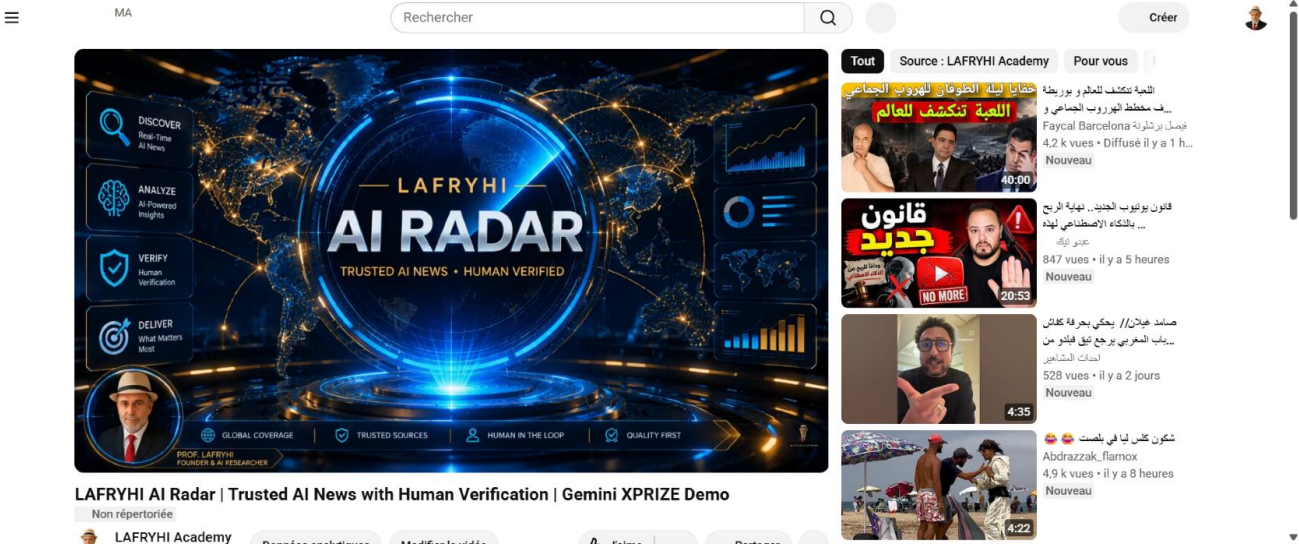

Figure 11. Public YouTube demo page. Captured 2026-08-02T01:05:12Z. Proves the publicly visible LAFRYHI AI Radar demo and its 1:46 runtime.

Title	LAFRYHI AI Radar Trusted AI News with Human Verification Gemini XPRIZE Demo
Platform	YouTube
Visibility	Publicly accessible
Runtime	1 minute 46 seconds

Conclusion

The evidence package demonstrates a live, monitored Google Cloud product using Gemini through Vertex AI, Firestore persistence, governed sources, and mandatory Human Verification.

Completed validation

- ✓ Live Cloud Run application and working homepage verified.
- ✓ Cloud Run revision, Ready state, deployment, health, and 100% traffic verified.
- ✓ Gemini 2.5 Flash through Vertex AI evidenced in authenticated operations data.
- ✓ Firestore-backed Source Registry and Decision Center verified.
- ✓ Authenticated Operator Dashboard and Human Verification workflow captured.
- ✓ Authenticated Google Cloud Billing Reports and visible credit/spend values captured.
- ✓ Cloud Logging availability, requests, latency, errors, health, and readiness verified.
- ✓ Public GitHub repository, repository tree, README, commit history, and MIT License recorded.
- ✓ Public YouTube demo URL, title, thumbnail, and 1:46 runtime verified.
- ✓ Every screenshot has a timestamp, caption, and statement of what it proves.
- ✓ No secret value, fabricated screenshot, invented billing value, or unresolved evidence marker remains.
